

TB SCREENING

UNITED KINGDOM

Kindly note that to be seen for this medical TB assessment you need to make an appointment at Hatmed by calling: 012 362 7180. Alternatively send your contact details to rina@hatmed.co.za / jackie@hatmed.co.za and an appointment date and time will be sent back to you in response.

What To Bring To Your Appointment

- An original, valid Passport
- Children below 18 years of age need to be accompanied by a parent and have their birth certificates. Should the parent not be present see below note regarding guardian.

Note:

- *Children need to be accompanied by the legal guardian and the legal guardian has to have a letter from the child's parents stating that the guardian is known to the family and allowed to sign the certificate.*
- *Please ensure that details on the certificate are 100% correct as Hatmed cannot be held responsible for errors once the applicant has signed the certificate.*
- *Please keep to your allocated appointment time.*

The screening process:

- All applicants will be screened by one of our medical doctors. A chest X-ray is required as part of the screening process. Please note that occasionally delays can be experienced at the X-ray unit due to large number of patients needing X-rays. If the Chest X-ray is normal with no signs of active or old pulmonary Tuberculosis (TB), you will receive your certificate on the same day. The certificate will be valid for 6 months from the date of your examination and X-ray. You may be asked to do TB Sputum testing if there are any signs of old or current Tuberculosis on the Chest X-ray or in case of Pregnancy. Please note that the TB Sputum tests are for your own cost additional to the normal screening cost. These test results will take approximately 8 weeks until the final results are available. We will notify you when the results are available and the certificate is ready for collection.
- Children below the age of 11 do not need to do a Chest X-ray and will receive a clinical examination by a medical doctor. A chest X-ray may be requested at the discretion of the medical doctor.
- Pregnant women may choose to either proceed with the Chest X-ray with double lead shielding to protect the unborn baby, or may opt for sputum testing, or alternatively wait to proceed with the screening after the birth of the child.
